

Sarvesh Shelar

Software Engineer | Full Stack and Backend Development

Phone: 9819902853 | Email: sarvesh322shelar@gmail.com

GitHub: github.com/phantom-blaq | LinkedIn: linkedin.com/in/sarvesh-s-579a39332

SUMMARY

Software Engineer experienced in designing and developing scalable enterprise applications using React.js, Node.js, TypeScript, Python, PostgreSQL, and FastAPI. Strong background in RESTful APIs, backend services, third-party integrations, production applications, and full-stack development. Experienced in building AI-powered applications using LLMs, AI agents, Retrieval-Augmented Generation (RAG), and vector databases.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, C++

Backend: Node.js, Express.js, FastAPI, REST APIs

Frontend: React.js, Redux, HTML5, CSS3

Databases: PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, CI/CD, Git, GitHub

Engineering: Prisma ORM, TanStack Query, Postman, API Integration, JWT, OAuth 2.0, Agile Development, Code Reviews

AI: LLMs, AI Agents, Retrieval-Augmented Generation (RAG), Prompt Engineering, Vector Databases

EXPERIENCE

VE3 Global

Aug. 2025 – Present

Software Engineer

- Engineered a **Super Agent Platform** enabling users to create, configure, and deploy customizable enterprise AI agents, adopted across 3+ client teams.
- Implemented **multi-model orchestration and intelligent query routing**, enabling the platform to analyze query requirements and dynamically select the most suitable LLM, improving response relevance and optimizing model usage.
- Implemented **multi-tenancy** across the AI platform, enabling isolated tenant configurations, data access, and agent workflows for scalable enterprise deployments.
- Spearheaded an **AI-powered document classification platform for NHS Scotland** end-to-end, from system design and development through production deployment, achieving over 90% classification accuracy; designed document ingestion pipelines with **Human-in-the-Loop (HITL)** validation, reducing manual review time by 30%.
- Developed scalable **Node.js/PostgreSQL backend services** for connector integrations, metadata management, and AI workflows, integrating Python-based LLM services and reducing average response latency by 20%.

VE3 Global

Jan. 2025 – Jul. 2025

Software Engineer Intern

- Built document processing capabilities for **cards, documents, and web links**, implementing **chunking, embeddings, and vector database pipelines** to enable semantic retrieval and context-aware querying across ingested content.
- Integrated **Google Drive, SharePoint, and OneDrive** with the platform for automated document ingestion and processing, implementing secure **OAuth 2.0** flows for third-party connectivity and access.
- Developed **RESTful APIs and backend services** to manage document metadata, ingestion workflows, and retrieval operations, improving application responsiveness by 15% and reducing redundant requests by 40%.

PROJECTS

UPSC Smart Study Platform

2026

- Built a **full-stack resource management platform** using **React.js** and **Node.js/Express**, adopted by 50+ UPSC aspirants to organize and track study materials via Google Drive and OneDrive integrations.
- Designed **RESTful APIs** and a PostgreSQL data layer, and implemented a **vector database retrieval pipeline** (chunking + embeddings) that reduced manual material search time by 35% and improved Q&A relevance accuracy to over 85%.
- Added automated **email reminders** and web-search-based resource discovery, cutting manual resource-hunting time by roughly 30% for active users.
- Tech Stack:** React.js, Node.js, TypeScript, Python, PostgreSQL, Vector DB, LLM APIs

EDUCATION

Savitribai Phule Pune University

2022 – 2024

Master of Computer Applications (MCA)

CGPA: **7.9**

University of Mumbai

2019 – 2022

Bachelor of Science in Computer Science (B.Sc CS)

CGPA: **9.28**
